

As a group :

1. Personas

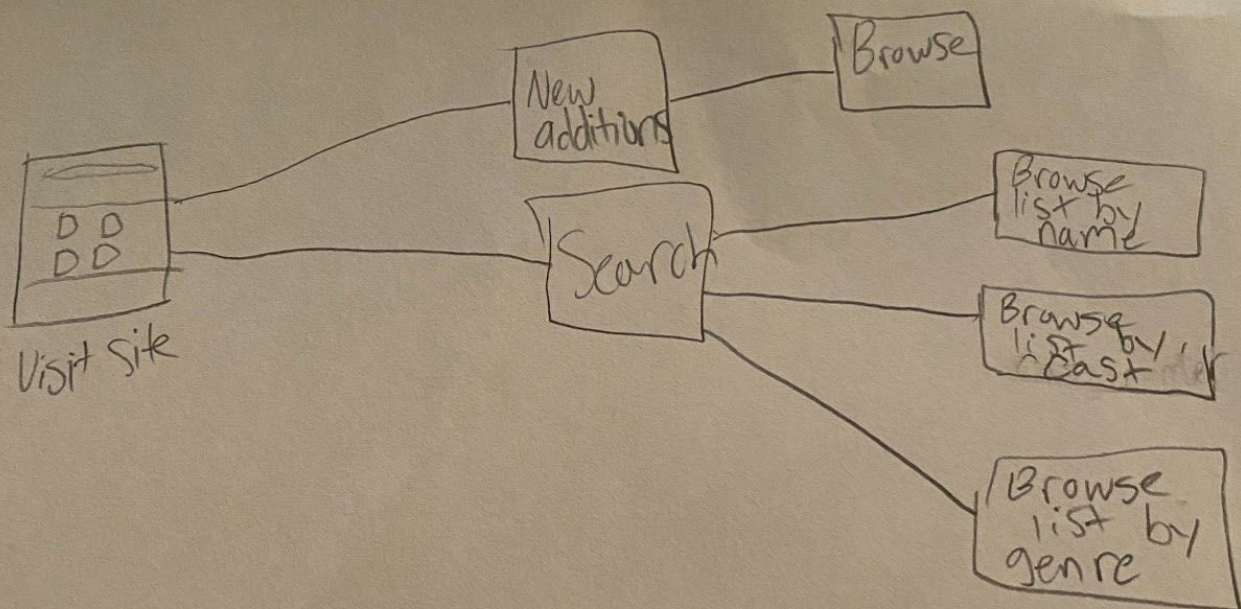

- Teens
 - Sam is a teen in high school who wants a simpler, easier to use interface for finding things to watch on netflix so she can save time finding what she wants faster.
- Single Adults
 - Bob is a 22 yr old college student stuck inside with no homework for once
- Couples
 - Tom and Mary have work from home and have a lot of free time at night due to the COVID quarantine
- Families
 - James is a 34 year old accountant who wants to find family-friendly shows and movies that he can watch with his 6 year old daughter.

2. The four group members, the professor, producers and netflix itself

3. We each made maps and the 'experts' (us) reviewed them.

Individually:

4. Draw a "map"

5. Finally use your map to write scenarios and user user stories

Scenarios

- Sam just got home from school and she is bored because of the quarantine. She decides she wants to watch a horror movie but she never finds the netflix genre search very useful and it usually shows her things she doesn't want and the screen is fairly cluttered. She decides to use CheckFlix to find some horror movies she might like to watch.
- Bob finished all his homework for college and decides he wants to find movies starring Liam Neeson. Everytime he goes on Netflix he is annoyed by the list of irrelevant movies like new additions and featured movies so he visits CheckFlix so he can cut out all the distractions and find a list of movies starring Liam Neeson quickly.
- Tom and Mary just finished binge watching a show on netflix and they want a new one. They wonder if the recommended series are actually highly rated or are just being promoted by netflix. They don't want to get a few episodes into a show they don't like so they decide they want a third party source to lookup shows. They go to CheckFlix and search for a new series they can binge watch together without the netflix recommendations taking all their attention.
- James watches childrens shows on netflix with his 6 year old and his show recommendations are full of shows from when his child was a toddler. He wants a third party search functionality to get suggestions without his past shows being incorporated in what he is recommended. He goes to CheckFlix and finds a show for his child to watch without the recommendations of shows that his child has grown out of being all over the screen.

User stories

- As a teen I want a simple netflix search feature so I can avoid the clutter of the usual netflix search and find something to watch faster.
- As a single adult I want a simple search feature for movie leads so I can quickly find movies that star my favorite actors / actresses.
- As a couple we want a third party new addition feature so we can get trustworthy recommendations free from netflix promotion.
- As a father I want a search by genre feature that is separate from netflix so I can get recommendations that don't factor in my past viewing history.

6. From your scenario and user stories develop a feature list
 - Search by actor/actress
 - New additions to netflix feature
 - Search by genre
 - Search by show/movie name
 - Search by year
