

## Group 4 - Design Sprint Day 2

- Goal of the App:
  - The goal of our website (CheckFlix) is to give users with no subscriptions access to information regarding new movies and shows.
  
- Generated Feature List:
  1. Search bar to search for movies by title name or director's name
  2. Card view on homepage that combines movies and shows in their corresponding categories.
  3. Filter option to filter movies and shows based on maturity rating, year released, type, duration, country of release.
  
- Solution Sketches:
  - **Feature 1:**

This feature uses a 'search by title' and 'search by director' button to search using these 2 parameters. This feature serves as a pop-up that blurs the background which is what the shading is in the sketch.

- Search pop-up when user clicks search button
- 'search by' buttons
- Background blurred when search box appears

- **Feature 2:**

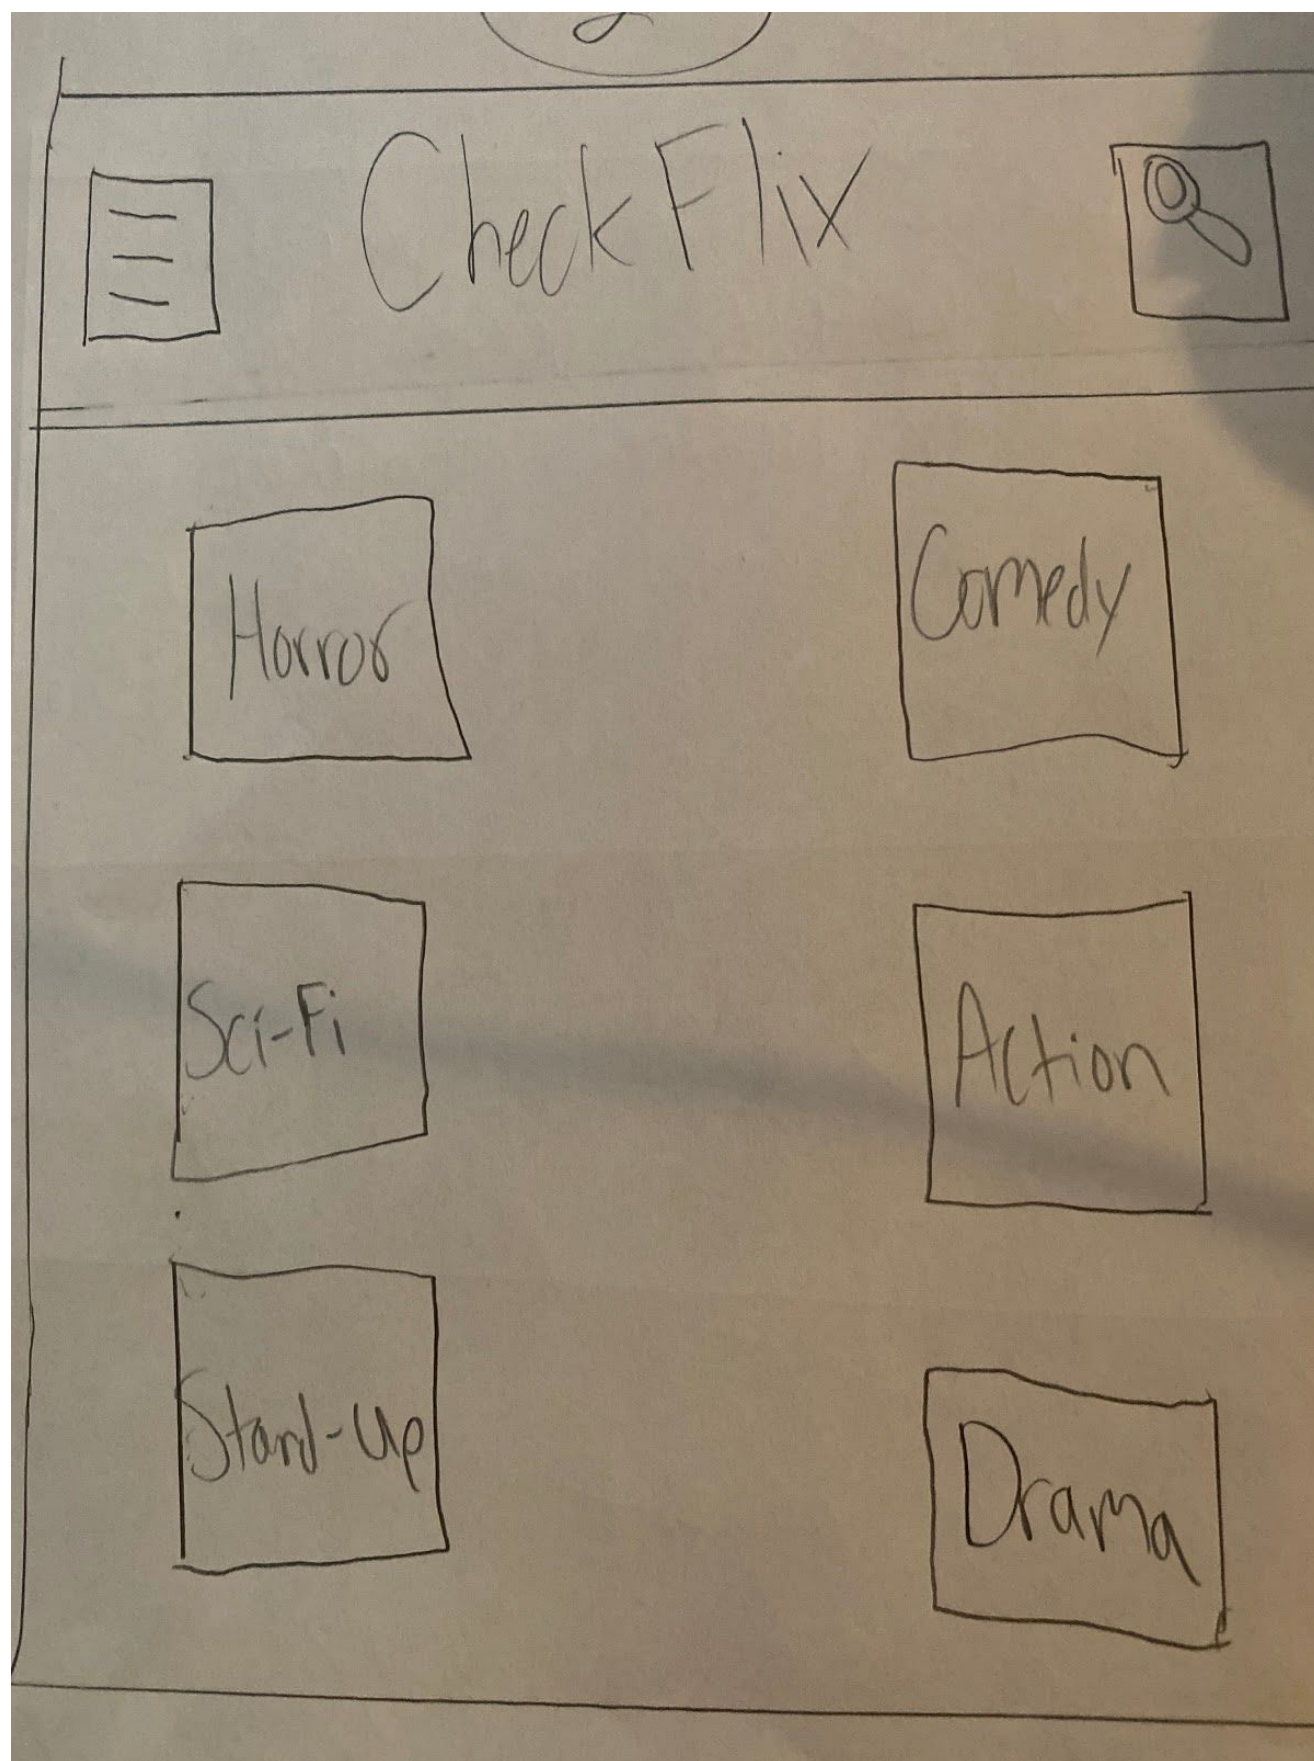

①

This feature allows the user to see a card view of genres so they can quickly browse common genres of shows and movies.

③

- Card layout
- Menu icon top-left
- Search icon top-right
- This is the home page, first thing a user will see on the site.

- **Feature 3:**

This feature allows the user to filter results by title, date and duration by using a dropdown button to change the "filter by:" option.

<div>☰</div> <div>CheckFlix</div> <div>🔍</div>		
'Fast and Furious'		filter by: title ▼
title	date	duration
• _____	• _____	• _____
• _____	• _____	• _____
• _____	• _____	• _____
• _____	• _____	• _____
• _____	• _____	• _____

- The searched query is at the top, 'fast and furious'.
- Title, date and duration are shown
- User can filter results by title, date and duration.
