

Group 4 - Design Sprint Day 2

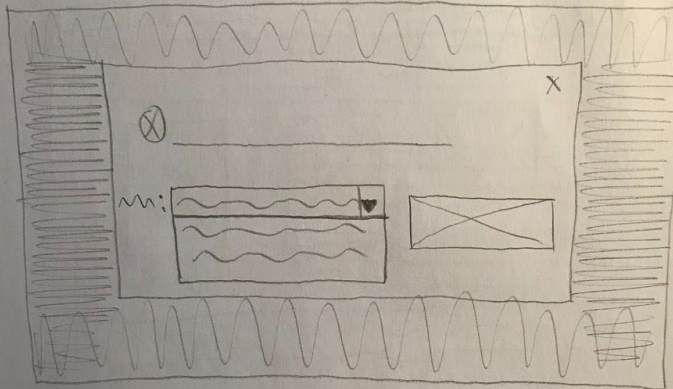

- Goal of the App:
 - The goal of our website (CheckFlix) is to give users without a Netflix subscription access to information regarding new movies and shows.

- Generated Feature List:
 1. Search bar to search for movies by title name or director's name
 2. Card view on homepage that combines movies and shows in their corresponding categories.
 3. Filter option to filter movies and shows based on maturity rating, year released, type, duration, country of release.

- Solution Sketches

Search Menu Sketch

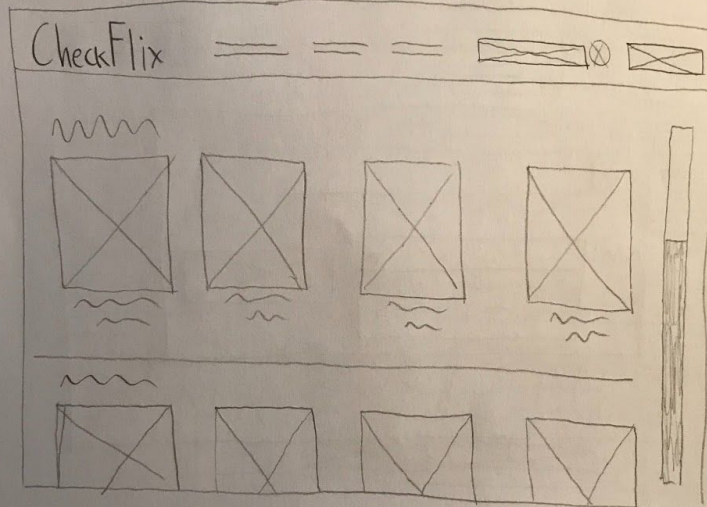

CheckFlix will have a search feature to look up movies and shows by title. The background of the site will be out of focus.

- Appears as a pop-up box when the search button is clicked.
- Has basic options for the initial search, options for title, director, and actor. Drop-down box.

Homepage Sketch

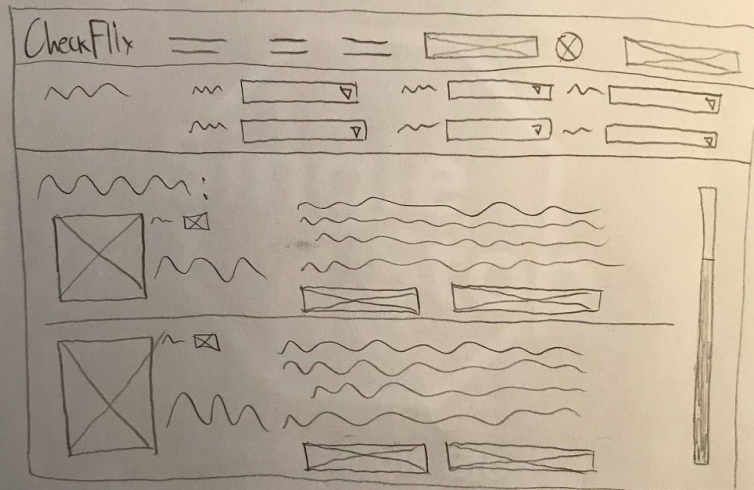

CheckFlix's home page will use a Card view to display the top and trending movies and shows on Netflix

- Menu bar with Search button, Pages for most popular, new, etc.
- Images displayed for shows and movies with titles beneath.
- Images can be clicked on to see more info.

Search Results & Refine Results Interface

After initial search, results will be displayed with options for refining the search.

- Below the top menu bar is the area for refining search results
- Bottom area lists notes, shows photo, details.
- Refining search updates the list in real time.
